

Hi

My name is Vrej Sarkis. I am a cardiac sonographer. I work in 2 different hospitals in Armenia.

I moved to Armenia from Syria because of the Syrian war and trying to establish medical work in Armenia.

First, I do adult's cardiac sonography once a week in the second medical unit in city Yerevan.

I scan patients mostly who are being referred by local neurologists and internists to exclude cardiac etiology of diseases.

Second, I scan babies heart upon emergency calls in the neonatal intensive care unit of hospital Muratsan in Armenia. The wonderful ecourse of Pegasus in pediatric echocardiography helped me lot.

Congenital heart defects are major cause of death in newborns.

Through Pegasus ecourse, I recognize self-dependent pathological cases easier in children and newborns. The ecourse of pegasus covers comprehensive topics and modules that helped me to deal with almost all cases without problem. I have detected about 16 congenital cardiac defects in newborns (PDA, VSD, ASD, TOF, ect..) and all these defects were being taught by Pegasus ecourse.

Thanks to pegasus ecourse that not only contributed to develop my skills in pediatric echocardiography but it also helped to reduce the mortality cases in our community.

I hope all people to be healthy.

With best Regards

Dr.Vrej Sarkis
